No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present nucleotide sequence, the coding region of which is also colaimed, is that of cDNA encoding human 53010, a novel member of the CC carboxylesterase family. The invention provides 53010 nucleic acids, antisense molecules, expression vectors, host cells, transgenic animals, 53010 proteins, fusion proteins, antigenic peptides, anti-53010 cc antibodies and methods for detecting the presence of 53010 polypeptides con nucleic acids, of identifying a compound that binds to the 53010 cc polypeptide, and of modulating the activity of the polypeptide. The 53010 cc public acids and polypeptides can act as novel diagnostic and cc therapeutic agents for controlling disorders involving aberrant or controlling the activity of the polypeptide. The 53010 cc therapeutic agents for controlling disorders involving aberrant or cc expression is regulated in some rodent pain models, 53010 molecules can also act as novel diagnostic targets and therapeutic agents for controlling neurological disorders, such as pain-related disorders. A claimed method of treating or preventing a disorder (especially a pain-created disorder) characterised by aberrant activity of a 53010 cc expression cell involves administering a compound that modulates 53010 cativity or expression. 53010 nucleic acids are also useful in chromosome cariava, for detection of variations or mutations, as surrogate markers and in pharmaccennomics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

Claim 1; SEQ ID NO 45; 542pp; English

The present invention describes the use of polypeptides related to urological disorders for identifying a compound capable of treating a urlogical disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Also described: (1) a method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological disorder; and (3) a method for treating a subject having a urological disorder. The compound has uropathic and cytostatic activities. The polypeptides related to urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a urological disorder. Disorders include urinary incontinence and benign prostatic hyperplasia. The present sequence encodes a human urological disorder related protein, which is used in the exemplification of the present

```
CC are selected from autoimmune/infilammatory disorder such as acquired CC immunodeficiency syndrome (AIDS), asthma, atheroselerosis, psoriasis, CC uveitis; a dell proliferative disorder such as arteriosclerosis, CC cirrhosis, hepatitis, and cancer; a neurological disorder such as CC Alrheimer's disease, Huntington's disease, dementia, Parkinson's disease; CC adevelopmental disorder such as renal tubular acidosis, epilepsy, CC anaemia; an endocrine disorder such as adenoma, thrombosis and infections CC disorder such as conjunctivitis, glaucoma, cataract; metabolic CC disorder such as conjunctivitis, glaucoma, cataract; metabolic CC disorder such as cystic fibrosis, diabetes and goitre; a gastrointestinal CC useful in a number of drug screening techniques and to analyse the CC useful in a number of drug screening techniques and to analyse the CC useful in a number of cell type. The invention is useful for creating CC throck-in humanised animals or transgenic animals to model human diseases, CC in somatic or germline gene therapy, to generate a transcript image of a CC tissue or cell type, for detecting differences in the chromosomal CC disorder in to to transgenic animals to model human diseases, CC in somatic or germline services on the chromosomal CC disorder in the chromosomal corrier or affected individuals, and as hybridisation probes for mapping naturally occurring genomic sequences. The present sequence is human DME-10 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

New diagnostic and therapeutic polynuclectides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or in gene mapping.

Claim 1; Page; 190pp; English

The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorders, which the provider disorders associated CC utoimmune/inflammatory disorders, gastrointestinal disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide constitutes as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp polynucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format CC directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

New polynucleotides and polypeptides, useful for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. P-PSDB; WPI; 2003-450961/43. DB; ADB64065. Tamechika ŗ,

Claim 1; Page; 222pp; English.

therapy.

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The polynucleotides and encoded proteins are useful as pharmaceutical agents and many disease-related genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell regeneration. Membrane proteins, signal transduction-related proteins, ranscription-related proteins, disease-related proteins and genes encoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2092 BP; 464 A; 552 C; 497 G; 579 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            19-DEC-2000;
20-DEC-2000;
09-JAN-2001;
30-JAN-2001;
            The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. 'activity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarterisclerotic, antiparkingonian, nootrop.
                                                                                                                                                           Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder
                                                                                                                                                                                                                                                                                                              Agarwal P, B
